DESCRIPTION

The TCMT1100 series consist of a phototransistor optically coupled to a gallium arsenide infrared-emitting diode in a 4 pin (single channel) up to 16 pin (quad channel) package. The elements are mounted on one leadframe providing a fixed distance between input and output for highest safety requirements.

Notes

- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.
- Wave soldering three cycles are allowed. Also refer to "Assembly Instructions" (www.vishay.com/doc?80054).
